

IQmanager™

Camera Management Software Utility

The IQmanager software utility simplifies installation and management of IQeye cameras on the network, and it can be used to manage everything from small-scale systems with a few IP cameras to a large-scale video surveillance system with many cameras.

With the IQmanager software, users can scan local or remote networks for all available IQeye cameras allowing real time changes to a single camera or multiple cameras simultaneously. Easy configuration of camera IP addresses, and pre-defined camera grouping based on local, global, new, and camera families are key features within the IQmanager software. Also available at a click of a button are batch camera settings, firmware updates, and camera diagnostics to keep the management of IQeye cameras simple.
